Project Title

Automating Standard Laptop Orders with Flow Designer

Team Members

- **Team Member:** SIVARANJANI S
- **Team Member:** SAKTHISRI P

Problem Statement

The process of ordering standard laptops in an organization may involve multiple manual steps such as submitting requests, checking approvals, verifying laptop availability, assigning devices, and updating records. These manual activities can cause delays, errors, and unnecessary workload for the IT and procurement teams.

Proposed Solution

Develop an automated laptop-ordering process using **Flow Designer**. The system will automate request submission, approval routing, availability checks, task creation, notifications, and order/status updates.

Key Objectives

- Automate standard laptop requests.
- Reduce manual intervention.
- Route requests to the appropriate approvers.
- Automatically create fulfillment tasks.
- Notify users about request status.
- Maintain accurate request and asset records.
- Reduce processing time and human errors.

Expected Outcome

A streamlined and automated laptop-ordering workflow that makes the request process faster, more transparent, and easier to manage.

2. Empathy Map Canvas

Empathy Map Area	User Insights
Says	“I need a laptop quickly.” / “I want to know the status of my request.” / “I don't want to fill out multiple forms.”
Thinks	“Who needs to approve my request?” / “Is the laptop available?” / “How long will it take?”
Does	Submits a laptop request, waits for approval, follows up with IT, checks request status, and receives the laptop.
Feels	Frustrated when there are delays, confused when the status is unclear, and satisfied when the process is quick and transparent.
Pains	Manual forms, long approval times, lack of status updates, repeated communication, and data-entry errors.
Gains	Faster processing, automatic notifications, clear request tracking, fewer manual steps, and quicker laptop delivery.

Main User

Employee requesting a standard laptop

Supporting Users

- Manager/Approver
- IT Support Team
- Procurement Team
- Asset Management Team

3. Brainstorm & Ideation Prioritization Template

Brainstorming Ideas

No.	Idea	Description
1	Automated Request Form	Create a simple form for employees to request a standard laptop.

No.	Idea	Description
2	Automatic Approval	Send the request automatically to the employee's manager for approval.
3	Availability Check	Automatically check whether the standard laptop is available.
4	Automatic Task Creation	Create IT fulfillment tasks automatically after approval.
5	Email/Notification Alerts	Notify users when the request is submitted, approved, rejected, or completed.
6	Request Tracking	Allow employees to track their laptop request status.
7	Asset Record Update	Automatically update the laptop/asset record after assignment.
8	Escalation	Automatically escalate requests that remain pending beyond a defined time.
9	Rejection Handling	Send the requester the reason when a request is rejected.
10	Dashboard	Provide IT with a dashboard showing pending, approved, and completed requests.

Ideation Prioritization

Use **Impact vs. Effort** to prioritize the ideas.

Idea	Impact	Effort	Priority
Automated Request Form	High	Low	High
Automatic Approval	High	Medium	High
Availability Check	High	Medium	High
Automatic Task Creation	High	Medium	High
Email/Notification Alerts	Medium	Low	High
Request Tracking	High	Medium	High
Asset Record Update	High	Medium	High

Idea	Impact	Effort	Priority
Escalation	Medium	Medium	Medium
Rejection Handling	Medium	Low	High
Dashboard	Medium	High	Medium

Prioritized Solution

Employee Request → Automatic Approval → Availability Check → IT Task Creation → Laptop Assignment → Asset Update → User Notification → Request Closure

This can serve as the main workflow for your **Flow Designer** project.
