5.1 Development Overview

The development phase focuses on implementing the **Standard Laptop Order Automation** in ServiceNow using **Flow Designer**.

The system automates the process from employee request submission to laptop assignment and request closure.

Development Process

Service Catalog → Laptop Request → Flow Designer → Manager Approval → Availability Check → IT Fulfillment → Asset Update → Notification → Closure

5.2 Development Modules

The project is divided into the following modules:

1. **User and Employee Module**
2. **Laptop Request Module**
3. **Approval Module**
4. **Laptop Availability Module**
5. **Fulfillment Module**
6. **Asset Management Module**
7. **Notification Module**
8. **Request Tracking Module**

5.3 Module 1 – Laptop Request Form

A ServiceNow Service Catalog item is created for employees to request a standard laptop.

Request Form Fields

Field	Type	Required
Employee Name	Reference	Yes
Employee ID	Text	Yes
Department	Choice/Reference	Yes
Manager	Reference	Yes
Laptop Type	Choice	Yes
Required Date	Date	Yes
Location	Choice/Text	Yes
Business Justification	Multi-line Text	Yes

Development Steps

1. Create a new Service Catalog item.
2. Add the required variables.
3. Set mandatory fields.
4. Add appropriate field validations.
5. Configure the form to create a laptop request.
6. Test the form using sample employee data.

5.4 Module 2 – Flow Designer Development

A Flow Designer flow is created to automate the laptop request process.

Trigger

The flow starts when a **new standard laptop request is submitted**.

Flow Actions

START

Laptop Request Submitted

Validate Request

Identify Manager

Send Manager Approval

Approval Decision

Approved Rejected

Check Notify

Inventory Employee

Available? Close

| — No —> Notify IT/Procurement

Yes

Create Fulfillment Task

↓

Assign Laptop

↓

Update Asset Record

↓

Notify Employee

↓

Close Request

5.5 Module 3 – Approval Development

The approval process is configured in Flow Designer.

Process

- The system identifies the employee's manager.
- The laptop request is sent to the manager.
- The manager can **Approve** or **Reject** the request.
- If approved, the flow continues.
- If rejected, the employee is notified and the request is closed.

Approval Conditions

Condition	Action
Approved	Continue to inventory check
Rejected	Notify employee and close request
Approval pending	Keep request in pending state

5.6 Module 4 – Laptop Availability Check

After approval, the system checks whether a standard laptop is available.

Process

Approved Request

Search Laptop Inventory

Is Laptop Available?

/ \

Yes No

Continue Notify IT/

Procurement

If Laptop Is Available

- Select an available laptop.
- Create the fulfillment task.
- Assign the laptop to the employee.
- Update the asset record.

If Laptop Is Not Available

- Keep the request in an appropriate pending state.
- Notify the responsible IT/procurement team.
- Update the requester when availability changes.

5.7 Module 5 – Fulfillment Task

After successful approval and availability checking, Flow Designer automatically creates an IT fulfillment task.

Fulfillment Task Information

- Request number
- Employee name
- Employee ID
- Laptop type

- Assigned laptop
- Required date
- Location
- Fulfillment group
- Task status

Task Flow

Create Task → Assign IT Team → Prepare Laptop → Assign to Employee → Complete Task

5.8 Module 6 – Asset Management

After the laptop is assigned, the asset information is updated.

Asset Details

Field	Example
Asset ID	LAP-001
Laptop Type	Standard Laptop
Serial Number	SN001234
State	In Use
Assigned To	Employee
Location	Office
Assignment Date	Current date

This prevents the same laptop from being incorrectly assigned to another employee.

5.9 Module 7 – Notification Development

Automatic notifications are configured for important workflow events.

Event	Recipient	Notification
Request submitted	Employee	Request received

Event	Recipient	Notification
Approval required	Manager	Approval request
Request approved	Employee/IT	Request approved
Request rejected	Employee	Request rejected
Laptop unavailable	IT/Procurement	Availability issue
Laptop assigned	Employee	Laptop assigned
Request completed	Employee	Request completed

5.10 Module 8 – Request Tracking

The employee should be able to view the status of the request.

Example Statuses

Submitted

5.11 Business Rules

The following rules can be implemented during development:

1. Only authorized employees can submit laptop requests.
 2. Required fields must be completed before submission.
 3. Every request must have an appropriate approver.
 4. A request must be approved before fulfillment.
 5. Only available laptops can be assigned.
 6. An assigned laptop must be updated in the asset record.
 7. The employee must receive status notifications.
 8. Completed requests should be closed automatically.
-

5.12 Development Tools

Tool/Technology	Usage
ServiceNow	Development platform
Service Catalog	Laptop request form
Flow Designer	Workflow automation
CMDB	Configuration and asset information
ServiceNow Asset Management	Laptop tracking
Notifications	Automated communication
JavaScript	Custom logic where required

Tool/Technology	Usage
Reports/Dashboards	Request monitoring

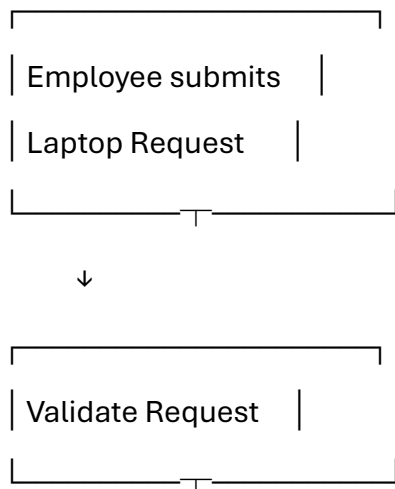

5.13 Development Testing

Each module is tested individually and then tested as a complete workflow.

Test Scenarios

- Valid laptop request submission.
 - Invalid/incomplete request.
 - Manager approval.
 - Manager rejection.
 - Laptop available.
 - Laptop unavailable.
 - Fulfillment task creation.
 - Laptop assignment.
 - Asset record update.
 - Notification generation.
 - Request closure.
-

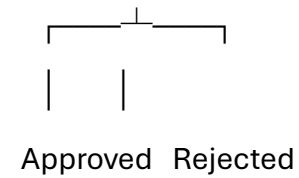

5.14 Final Developed Workflow

5.15 Development Outcome

The developed system provides an automated and structured process for standard laptop ordering. **Flow Designer** coordinates approval, inventory checking, fulfillment, asset updates, and notifications, reducing manual intervention and improving the visibility of each laptop request.
