- SIVARANJANI S
- SAKTHISRI P

6.3 Introduction

The “**Automating Standard Laptop Orders with Flow Designer**” project is designed to automate the standard laptop ordering process using **Flow Designer**. The system helps organizations manage laptop requests in a structured and automated manner.

The workflow reduces manual intervention by automating activities such as request submission, approval, task creation, and status updates.

6.4 Objectives

The main objectives of the project are:

- To automate the standard laptop ordering process.
- To reduce manual effort and processing time.
- To create an organized approval workflow.
- To automatically generate tasks for the required teams.
- To track the status of laptop requests.
- To improve accuracy and consistency in order processing.

6.5 Technologies Used

- **ServiceNow**

- **Flow Designer**
- **Service Catalog**
- **Workflow Automation**
- **Catalog Items and Requests**

6.6 Project Workflow

The standard laptop ordering process follows these steps:

1. The user submits a **Standard Laptop Order** request.
2. The request is received by the system.
3. Flow Designer triggers the configured flow.
4. The request is sent for the required approval.
5. After approval, tasks are automatically created for fulfillment.
6. The responsible team processes the laptop order.
7. The request status is updated automatically.
8. The request is completed after successful fulfillment.

6.7 Role of Flow Designer

Flow Designer is used to automate the different stages of the laptop ordering process. It connects the request, approval, task creation, and fulfillment activities into a single automated flow.

This reduces repetitive manual activities and provides a consistent process for handling standard laptop orders.

6.8 Expected Outcome

The project provides an automated and systematic approach for managing standard laptop orders. It helps reduce manual processing, improves request tracking, and ensures that each order follows the defined approval and fulfillment process.

6.9 Conclusion

The “**Automating Standard Laptop Orders with Flow Designer**” project demonstrates how ServiceNow Flow Designer can be used to automate an IT service request process. By implementing an automated workflow, the project improves efficiency, reduces manual intervention, and provides better visibility into the laptop ordering process.
